

FCC,

As an active amateur radio operator on all our HF bands, I definitely support RM-10352.

I think it's a good idea to bring 160m in line with all the other mode-segmented bands. It will protect wide-bandwidth modes from narrow-band interference, and vice versa.

I also think it will encourage the use of new digital modes, and in the future it would better support a beacon system for propagation studies similar to the Northern California DX Foundation/International Amateur Radio Union system on the 14MHz, 18.1MHz, 21MHz, 24.9MHz, and 28MHz bands.
